INVENTORY MANAGEMENT SYSTEM

FOR RETAILERS

ABSTRACT

This project is aimed at developing a desktop-based application named Inventory Management System for managing the inventory system of any organization. The Inventory Management System (IMS) refers to the system and processes to manage the stock of organization with the involvement of Technology system. This system can be used to store the details of the inventory, stock maintenance, update the inventory based on the sales details, generate sales and inventory report daily or weekly based. This project is categorized individual aspects for the sales and inventory management system. In this system we are solving different problem affecting to direct sales management and purchase management. Inventory Management System is important to ensure quality control in businesses that handle transactions resolving around consumer goods. Without proper inventory control, a large retail store may run out of stock on an important item. A good inventory management system will alert the wholesaler when it is time to record. Inventory Management System is also on important means of automatically tracking large shipment. An automated Inventory Management System helps to minimize the errors while recording the stock.

1. INTRODUCTION:

The project Inventory Management System is a complete desktop-based application designed on. Net technology using Visual Studio Software. The main aim of the project is to develop Inventory Management System Model software in which all the information regarding the stock of the organization will be presented. t is an intranet. based desktop application which has admin component to manage the inventory and maintenance of the inventory system.

This desktop application is based on the management of stock of an organization. The application contains general organization profile, sales details, Purchase details and the remaining stock that are presented in the organization. There is a provision of updating the inventory also. This application also provides the remaining balance of the stock as well as the details of the balance of transaction. Each new stock is created and entitled with the named and the entry date of that stock and it can also be updating any time when required as per the transaction or the sales is returned in case. Here the login page is created in order to protect the management of the stock of organization in order to prevent it from the threads and misuse of the inventory.

Inventory is the stock of physical items such as materials, components, work-in-progress, finished goods, etc., held at a specific location at a specific time. Inventory is the merchandise that is purchased and/or produced and stored for eventual sale. Inventory is a list

of what you have. In company accounts, inventory usually refers to the value of stocks, as distinct from fixed assets. An inventory would include items which are held for sale in the ordinary course of business or which are in the process of production for the purpose of sale, or which are to be used in the production of goods or services which will be for sale. Inventory is a list of names, quantities and/or monitory values of all or any group of items. Any quantifiable item that you can handle, buy, sell, store, consume, produce, or track can be considered inventory. This covers everything from office and maintenance supplies, to raw material used for manufacturing, to semi-finished and finished goods, to fuel used to power equipment used in the business.

1.1 PROJECT OVERVIEW:

Inventory management is the supervision of non-capitalized assets (inventory) and stock items. Inventory management software system is to track inventory levels, orders, sales and deliveries. It can also be used in the manufacturing industry to create a work order, bill of materials and other production related documents. Inventory Management System which is helpful for the businesses operate hardware stores, where owner keeps the records of sales and purchase. In this model, all the information regarding the stock of the organization will be presented and generates a billing to the customer. A key function of inventory management is to keep a detailed record of each new or returned product as it enters or leaves a warehouse or point of sale. Inventory Management System will have the ability to track sales and available

inventory, tells a store owner when it's time to reorder and how much to purchase.

Products are considered as the business resources for the organization. This includes managing the product with appropriate way to review any time as per the requirement. Therefore, it is important to have a computer-based IMS which has the ability to generate reports, maintain the balance of the stock, details about the purchase and sales in the organization. Before developing this application, we came up with 2 Inventory Management System existing in the market, which helps to give the knowledge for the development of our project. This application software is only used by the large organization but so we came up with the application which can be used by the small company for the management of their stock in the production houses.

After analyzing the other inventory management system, we decided to include some of common and key features that should be included in every inventory management system. So, we decided to include those things that help the small organization in a way or other.

2. LITERATURE SURVEY:

2.1 Existing problem

MISMANAGED ORDER MANAGEMENT:

Managing customer order to avoid overselling and running out of stock is one of the most difficult tasks. Delivering the orders on time and addressing their complaints if the

order has some issues will have a big role to play in the reviews and rating a brand is going to get.

EXPANDING PRODUCT RANGE:

Growing a product line and newly set up warehouse demand effective management of inventory stocks. Manually updating the stock list and tracking orders without real-time data will end up in mismanagement. All inventory managers need to view orders, and shipping details, and track the inventory stocks to allocate deliveries with the highest demands.

LACK OF A CENTRALIZED INVENTORY HUB:

Imagine switching multiple tabs for customer order details and tracking real time data. This leads to inventory managers getting frustrated and slow delivery of results. Without a unified dashboard, all conversation, order information, and delivery agents tracking will not flow into a single inbox.

ANALYZING THE MARKET DEMAND:

A look into the market of how the product is doing is very important as the demand accelerates the production followed by growth in inventory stocks. No analysis of the most selling or demand areas will end up having product shortages in the market leading to lesser customer satisfaction and losing out bon brand value.

OUTDATED PRODUCTS:

Updating products over time happens inevitably to keep the products fresh and stay

relevant to the trends with matching buyer's expectations in the market.so, in this process at the old products that are unsold need to be recorded for easy clearance and need to make way for the new ones.

2.2 PROBLEM STATEMENT DEFINITION:

Statement 1:

Statement 2:

Statement 3:

I am	I'm trying to	But	Because	Which makes me feel
the shop owner	know what inventory i have on hand	i couldn,t know	the inventory visibility is not much good in software	frustrated.

Statement 4:

I am	I'm trying to	But	Because	Which makes me feel
the worker	work with the inventory software	it is more complicated	there are lack of expertise	frustrated.

3. IDEATION & PROPOSED SOLUTION:

3.1 Empathy map canvas:

An empathy map is a collaborative tool teams can use to gain a deeper insight into their customers. Much like a user persona, an empathy map can represent a group of users, such as a customer segment. The empathy map was originally created by Dave Gray and has gained much popularity within the agile community.

Empathy mapping is tool that really helps you get to know your customers. By understanding what your customers think, feel, say and do you can develop rich insight which helps you to identify genuine issues, problems or concerns that your customer may have right now.

3.2 Ideation & brainstorming:

In the business world, ideation is associated with things such as inventing and/or developing new products or services or creating new means or methods of production or delivery of products or services. Amazon's "Prime" two-day delivery service is an example of ideation being used to address the question of how to serve consumers more efficiently.

Ideation is often specifically aimed at problem-solving. For example, production managers at a company may be charged with coming up with ideas on how to reduce production costs.

Ideation is often closely related to the practice of brainstorming, a specific technique that is utilized to generate new ideas. A principal difference between ideation and brainstorming is that ideation is commonly more thought of as being an individual pursuit, while brainstorming is almost always a group activity. Brainstorming is usually conducted by getting a group of people together to come up with either general new ideas or ideas for solving a specific problem or dealing with a specific situation.

Brainstorm & Idea Prioritization Template

Step 1

K.Praveen Rajan

Create a centralized record for all products	Identify stock locations	Do regular and accurate stock counts
Combine sales and inventory data	Create a purchasing process	Establish a method for markdowns

B.L. Raj Kumar

Build a stock receiving process	Create a system for returns	Determine a dead stock procedure
Just in Time	First In First Out (FIFO)	Stock Refillment

P. Muthu Narayanan

Inventory Accuracy	Track the stock Expiry date	Minimizes out-of-stock
Improves Stock Forecasting	Quantities of each stock type	use a consignment for inventory

R. Dinesh Kannan

Generate Invoice	Report management	Raw Materials required for production process
Formulate standard Operating procedures	Train the staff	Automate the process

3.3 Proposed solution:

The main goal of presenting a business proposal is to provide solution to a problem faced by a potential buyer. This section should be as comprehensive as possible, and able to address all the needs that you have pointed in the first section. proposed solution should relate the current situation to a desired result and describe the benefits that will accrue when the desired result is achieved.

To assess proposed solutions in order to determine how closely they meet stakeholder and solution requirements. When assessing a single solution, the business analyst determines whether the solution delivers enough business value to justify its implementation. This will most often be the case when a custom solution has been created to meet a particular business need. When assessing multiple alternative solutions, the business analyst has the additional goal of attempting to determine which solution delivers the greatest business value. This requires understanding the advantages and disadvantages of each alternative.

Problem statement 1:

Proposed solution 1:

S. No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	I am the customer, I am trying to buy a product, but I can't buy the product, because the data is inaccurate which makes me to feel disappoint.
2.	Idea / Solution description	Schedule frequent stock auditing like daily cycle counting of different stock categories in small, manageable batches.

3.	Novelty / Uniqueness	This is a common problem which was faced by the customers. And it will be fixed.
4.	Social Impact / Customer Satisfaction	By this solution customers were ease to buy their expected products with many discounts.
5.	Business Model (Revenue Model)	I will properly handle the frequent stocks in daily cycle and manage the batches to upload the accurate data.
6.	Scalability of the Solution	If customers are facing any problems, they are flexible to post their requirements in complaints section or in the straight to the shop.

Problem statement 2:

Proposed solution 2:

S. No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	I am the customer; I am trying to buy the product but the stocks are not maintained because the stocks are inconsistent which makes me anger.
2.	Idea / Solution description	Centralize your data with a cloud-based inventory management solution with real time data backup and automated inventory updates.

3.	Novelty / Uniqueness	These are the problems which was faced by the customers while the software is not handled properly.
4.	Social Impact / Customer Satisfaction	By this solution the customer can get the consistent data and can buy the valuable products.
5.	Business Model (Revenue Model)	I would maintain the data in cloud-Based inventory management solution with real time and get automated inventory updates.
6.	Scalability of the Solution	This solution will satisfy the customer. And the customers are flexible to say about them problems in customer complaints section.

Problem statement 3:

Proposed solution 3:

S. No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	I am the shop owner I am trying to know what inventory I have on hand but I couldn't know because the inventory visibility is not much good in software which makes me feel frustrated.
2.	Idea / Solution description	Add images with product descriptions in your inventory database to enhance accuracy and prevent misplaced inventory
3.	Novelty / Uniqueness	This is not the common problem and occurs

		somewhere.
4.	Social Impact / Customer Satisfaction	By adding the product images the shop owner can avoid this problem.
5.	Business Model (Revenue Model)	I would add the images of the product to enhance accuracy and prevent misplaced inventory.
6.	Scalability of the Solution	The shop owner is flexible contact the software designer to tell his problems at anytime.

Problem statement 4:

Proposed solution 4:

S. No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	I am the worker I am trying to work with the inventory software but it is more complicated because there is lack of expertise which makes me feel frustrated.
2.	Idea / Solution description	Outsource to an inventory management expert. Use in person training and online support contracts to help employees learn best practices for working with specialized inventory management software features.

3.	Novelty / Uniqueness	This is the common problem. In which starting must be little difficult to work with the new software then it will be fine.
4.	Social Impact / Customer Satisfaction	By giving training to employees the worker can arrest the problem.
5.	Business Model (Revenue Model)	I would give training to the employees who works in the software to solve this problem.
6.	Scalability of the Solution	The customer is flexible to say about his/her problems anytime to the designer If customer face he/she can say it in complaints section.

3.4 Problem solution:

Too many retailers have their minds in the wrong place, and instead of focusing on the success and growth of their business, they worry too much about personal accomplishments with the company. They start off with a strong work ethic, but when they see small successes, their motivation lessens, and they begin to coast.

To improve store operations, entrepreneurs can work to take a more hands-on approach to their management. They should be present at the storefront and work to engage customers and employees. Retailers should strive to be aware of their business in all aspects and work on progressing, even if it seems as if they've hit their peak. When business owners are actively involved with business operations, they can create a positive culture for their employers and consumers.

Purpose / Vision

1. CUSTOMER SEGMENT(S) `CS`

The user/customer who belonging to the shop.

6. CUSTOMER CONSTRAINTS `CC`

- There is no boundation of using this application because the user/customer who is having knowledge of this application can work on it easily.

5. AVAILABLE SOLUTIONS `AS`

-The user Schedule frequent stock auditing like daily cycle counting of different stock categories in small, manageable batches.

Define CS, fit into CC

Explore AS, differentiate

2. JOBS-TO-BE-DONE / PROBLEMS `J&P`

-The user/customer trying to buy a product but, I can't buy the product because the data is inaccurate which was shown in the list.

9. PROBLEM ROOT CAUSE `RC`

-The user/customer is new to use the application.
-And the user shouldn't know how to upload the products.

7. BEHAVIOUR `BE`

-The user/customer use different devices in their hands.
-People who do online Shopping can use this application regularly while comparing to others.

Focus on J&P, tap into BE, understand RC

Focus on J&P, tap into BE, understand RC

3. TRIGGERS `TR`

-The user should read the instruction to use the application easily.

4. EMOTIONS: BEFORE / AFTER `EM`

Before – The user/customer was uncomfortable to use the application before.

After – As the user/customer knows how to use this application then they will become comfortable and friendly with this environment...

10. YOUR SOLUTION `SL`

-The user should read the instruction given and to know how to upload the products.
-The user should upload the products frequently in daily cycle manner.

8. CHANNELS of BEHAVIOUR - Online `CH`

- Instructions given to the software should be followed properly.
- Advertise online to make the shop famous.

Offline
- To buy the products and to check the available can use the application.

Identify strong TR & EM

Extract online & offline CH of BE

4. REQUIREMENT ANALYSIS:

4.1 Funtional requirement:

Funtional requirements are the what of your website. It is all about the functions and core operations of your e-store that enable a user to take action on the website. They can be implemented as a single website feature and form the basis of the whole software development process.

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story/ Sub-Task)
FR-1	**User Registration**	Registration through Branch ID & MobileNumber
FR-2	**User Confirmation**	Confirmation via Mobile Number

		Confirmation via OTP
FR-3	**Product Management**	Easily trackproduct information (soldand available). Quickly produce reports for single or multiple sold products
FR-4	**Corrections & changes**	These specifications look at eachtransaction's insertion, modification, deletion, cancellation, and error checking.
FR-5	**Requirements for searching/reporting**	How userscan search for and obtaindata is described in this areaof the requirements.
FR-6	**Backup & Restoration**	This featurewill be necessary if your machine crashes and all of your datais lost.

4.2 Non-funtional requirement:

Non-funtional requirements are the how of your website. Named quality attributes of a system, they form user experience and imply some global, abstract expectations from the product. Non-functional requirements of online shopping system may derive from a sum of

functional requirements for eCommerce website and are implemented as a sum of web features.

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	How welldoes the software's implementation match the system's intended use.
NFR-2	**Security**	How willdata be stored, and who willhave access to it.
NFR-3	**Reliability**	The chance and percentage of the software working without failure for a givennumber of usesor period of time is referred to as reliability.
NFR-4	**Performance**	It is a measureof how quicklya system responds to

|		
		data requests basedon throughput and utilization.
NFR-5	**Availability**	This feature specifies how long the system operates, how long it takes to fix a problem, and how long it takes between lapses.
NFR-6	**Scalability**	Enjoy betterperformance without the hassle of relying on too many staffmembers for stock management.

5. PROJECT DESIGN:

5.1 Data flow daigrams

Level 0:
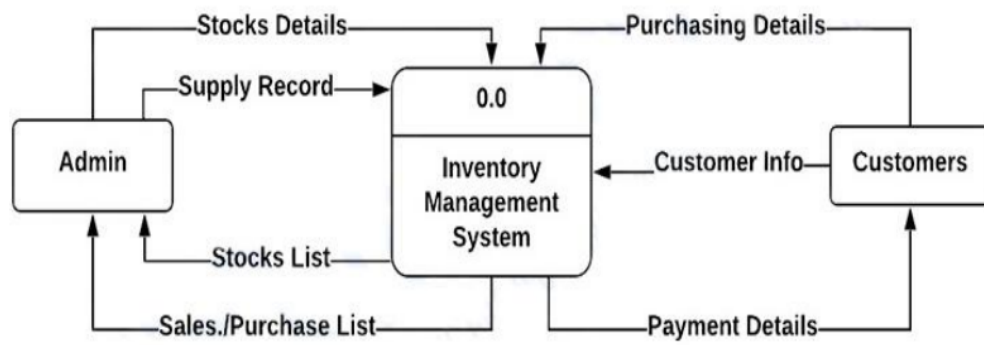

Level 1:
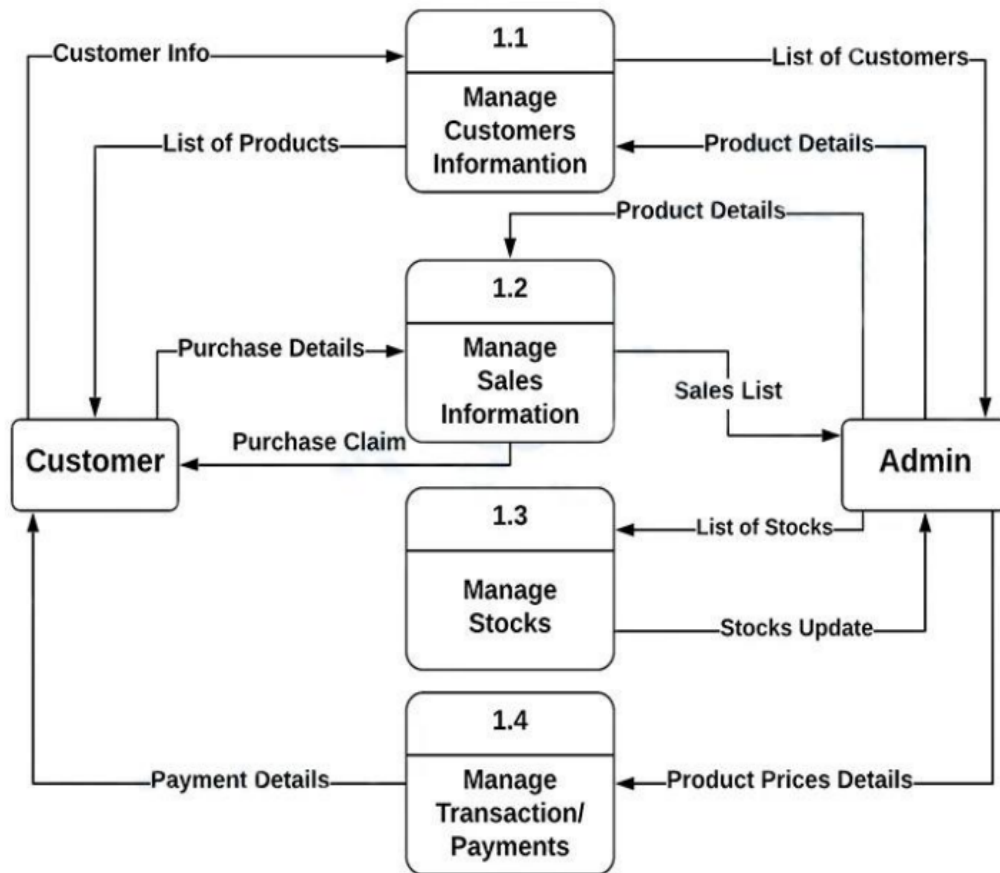

Level 2:
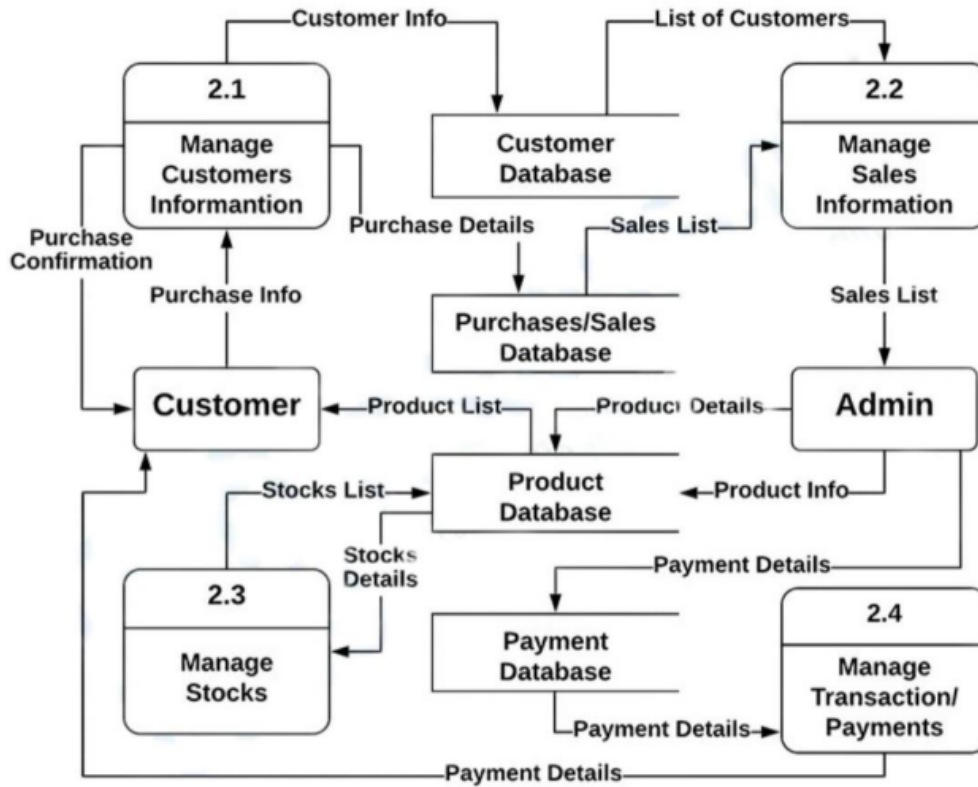

5.2 Solution & technical architecture:

solution architecture:

The Retail and consumer packaged goods industry reference architecture is a high-level view of a best-of-breed retail enterprise application landscape, including applications, functional areas, key integration points, and the associated recommended physical deployment.

The architecture addresses multi-cloud and hybrid cloud deployments, and the inclusion of machine learning and AI capabilities. The architecture components are based on industry best practices supporting the overall digital transformation of a retail enterprise.

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	**User Registration**	Registration through Branch ID & Mobile Number
FR-2	**User Confirmation**	Confirmation via Mobile Number Confirmation via OTP
FR-3	**Product Management**	Easily track product information (sold and available). Quickly produce reports for single or multiple sold products
FR-4	**Corrections & changes**	These specifications look at each transaction's insertion, modification, deletion, cancellation, and error checking.
FR-5	**Requirements for searching/reporting**	How users can search for and obtain data is described in this area of the requirements.
FR-6	**Backup & Restoration**	This feature will be necessary if your machine crashes and all of your data is lost.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	How well does the software's implementation match the system's intended use.
NFR-2	**Security**	How will data be stored, and who will have access to it.
NFR-3	**Reliability**	The chance and percentage of the software working without failure for a given number of uses or period of time is referred to as reliability.
NFR-4	**Performance**	It is a measure of how quickly a system responds to data requests based on throughput and utilization.
NFR-5	**Availability**	This feature specifies how long the system operates, how long it takes to fix a problem, and how long it takes between lapses.
NFR-6	**Scalability**	Enjoy better performance without the hassle of relying on too many staff members for stock management.

Technical architecture:

Technology has come to the forefront to rescue mankind from extinction and help millions of people to survive at this trying time. But the retail industry has been utilizing the technology for a considerable amount of time and the companies who were ahead of the curve in terms of technology utilization were the first to respond to the current situation successfully.

As we have seen in the previous section under the business architecture, it is evident that retail stores similar to any other enterprise system consist of various systems built by different vendors utilizing different standards and protocols. The very first challenge of building a technical architecture for a retail store is to identify these various systems and integrate them seamlessly so that they can operate efficiently and coherently.

7	File Storage	File storage requirements	IBM Object Storage
8	External API-1 Barcode	To Scan the product barcode	Zia Barcode Scanner
9	Infrastructure (Server / Cloud)	Cloud Server Configuration	Cloud Foundry, Kubernetes

5.3 User Stories:

User stories are a team communication strategy that shifts the focus from talking about products to speaking about how those products add value to the user. These stories talk about new products, features, or updates from the customer's perspective instead of the business value. It's a fundamentally different way of conceptualizing potential solutions for any given problem.

Originally used as a part of the agile methodology, user stories are valuable for all product teams. They give you, the product manager, a way to communicate high-level concepts about your product in clear and concise terms. A user story can be as straightforward as a single sentence or a series of statements about how you envision people will interact with your product upon release.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering Branch ID & Mobile Number, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I will receive confirmation Message once I have registered for the application	I can receive confirmation Message.	High	Sprint-1
	Login	USN-3	As a user, I can log into the application by entering email & password after installing the web application.	I can access the dashboard by login into the application	High	Sprint-1
	Dashboard	USN-4	As a user, I can view the charts and graphs representation of the dataset and the information shown in the dashboard	I can analyse the stocks in my retail store	High	Sprint-1
Customer (Web user)		USN-1	As a user, I can register for the web application entering my Mobile Number, password and confirming my password.	I can access my account dashboard	High	Sprint-1
Customer Care Executive		USN-2	As a user, after completing the registration I will receive confirmation email once I have registered for the web application	I can receive confirmation Message.	High	Sprint-1
Administrator		USN-3	As a user, I can register for the application through Branch ID.	I can register & access the dashboard	Medium	Sprint-1
	Login	USN-4	As a user, I can log into the application by entering Mobile Number & password after installing the web application.	I can access the dashboard by login into the application	High	Sprint-1
	Dashboard	USN-5	As a user, I can view the charts and graphs representation of the dataset and the information shown in the dashboard.	I can analyse the stocks in my retail store	High	Sprint-1
Customer Care Executive		CCE-1	As a customer care executive, I will always be available for the interaction with the customer to clarify the queries.	An executive will analyse the customer complaints and rectify their problems.	High	Sprint-2
Administrator		ADMIN-1	As an administrator, I will manage backup and recovery, data modelling and design, distributed computing, database system, and a data security.	Administrator is the responsible for updating and maintaining the data	High	Sprint-2

6. PROJECT PLANNING & SCHEDULING:

6.1 Sprint planning & estimation:

It may be possible to estimate further down the product backlog during sprint planning; however, this would reduce the focus on the purpose of the event and lower the team's ability to achieve the outcomes of it. The process of estimation often raising technical risks, challenges, or decisions.Estimation is hard. For software developers, it's among the most difficult if not the most difficult aspects of the job. It must take into account a slew of factors that help product owners make decisions that affect the entire team and the business. With all that at stake, it's no wonder everyone from developers to upper management is prone to getting their undies in a bunch about it. But that's a mistake. Agile estimation is just that: an estimate. Not a blood-oath. There's no requirement to work weekends in order to compensate for under-estimating a piece of work. That said, let's look at some ways to make agile estimates as accurate as possible.

Involving everyone (developers, designers, testers, deployers... everyone) on the team is key. Each team member brings a different perspective on the product and the work required to deliver a user story. For example, if product management wants to do something that seems simple, like support a new web browser, development and QA need to weigh in because their experience has taught them what dragons may be lurking beneath the surface.Likewise, design changes require not only the design team's input, but that of development and QA as well. Leaving part of the broader product team out of the estimation process creates lower quality estimates, lowers morale because key contributors don't feel included, and compromises the

quality of the software.

6.2 Sprint delivery schedule :

Since sprints take place over a fixed period of time, it's critical to avoid wasting time during planning and developement. And this is precisely where sprint scheduling enters the equation. In case you're unfamiliar, a sprint schedule is a document that outlines sprint planning from end to end. It's one of the first steps in the agile sprint planning process—and something that requires adequate research, planning, and communication.

Before we dive into sprint scheduling, let's first take a closer look at how sprints work. In short, a sprint is a set period where an agile team works to complete a specific set of development tasks. In most cases, there are multiple sprints within a larger development project. Sprints ultimately provide a framework for taking large, complex software projects and breaking them down into digestible phases. When a sprint ends, the team shows their work to the project owner, who reviews it. If the project meets expectations, the team moves on to the next sprint. In some cases, rework may be necessary. This often occurs due to a lack of planning and communication.

The product owner typically determines the duration of the sprint and checks with the team to make sure it aligns with its workloads and resources. While there may be multiple project heads collaborating on a sprint, it's ultimately important to have one owner who oversees all aspects of sprint planning. Likewise, there should be one single schedule to avoid

confusion and keep projects running according to a set plan. Teams often run into trouble when they create more than one schedule. This can create conflict and derail projects midway through their cycles. To ensure things stay on track, one schedule makes sense.

Project Tracker:

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	19 Nov 2022	20	19 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	19 Nov 2022	20	19 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

Velocity:

we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

Sprint Duration = 6 days
Velocity of the team = 20 points

$$\text{Average Velocity (AV)} = \frac{\text{Velocity}}{\text{Sprint duration}}$$
$$AV = 20/6$$

$$= 3.34$$

$$\text{Average Velocity} = 3.34$$

Burndown Chart:

A burn down chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down charts can be applied to any project containing measurable progress over time.

6.3 Reports from JIRA :

Jira is written in Java and uses the Pico inversion of control container, Apache OFBiz entity engine, and WebWork 1 technology stack. For remote procedure calls (RPCs), Jira has REST, SOAP, and XML-RPC interfaces. Jira integrates with source control programs such as Clearcase, Concurrent Versions System (CVS), Git, Mercurial, Perforce, Subversion, and Team Foundation Server. It ships with various translations including English, French, German, Japanese, and Spanish. Jira implements the Networked Help Desk API for sharing customer support tickets with other issue tracking systems.
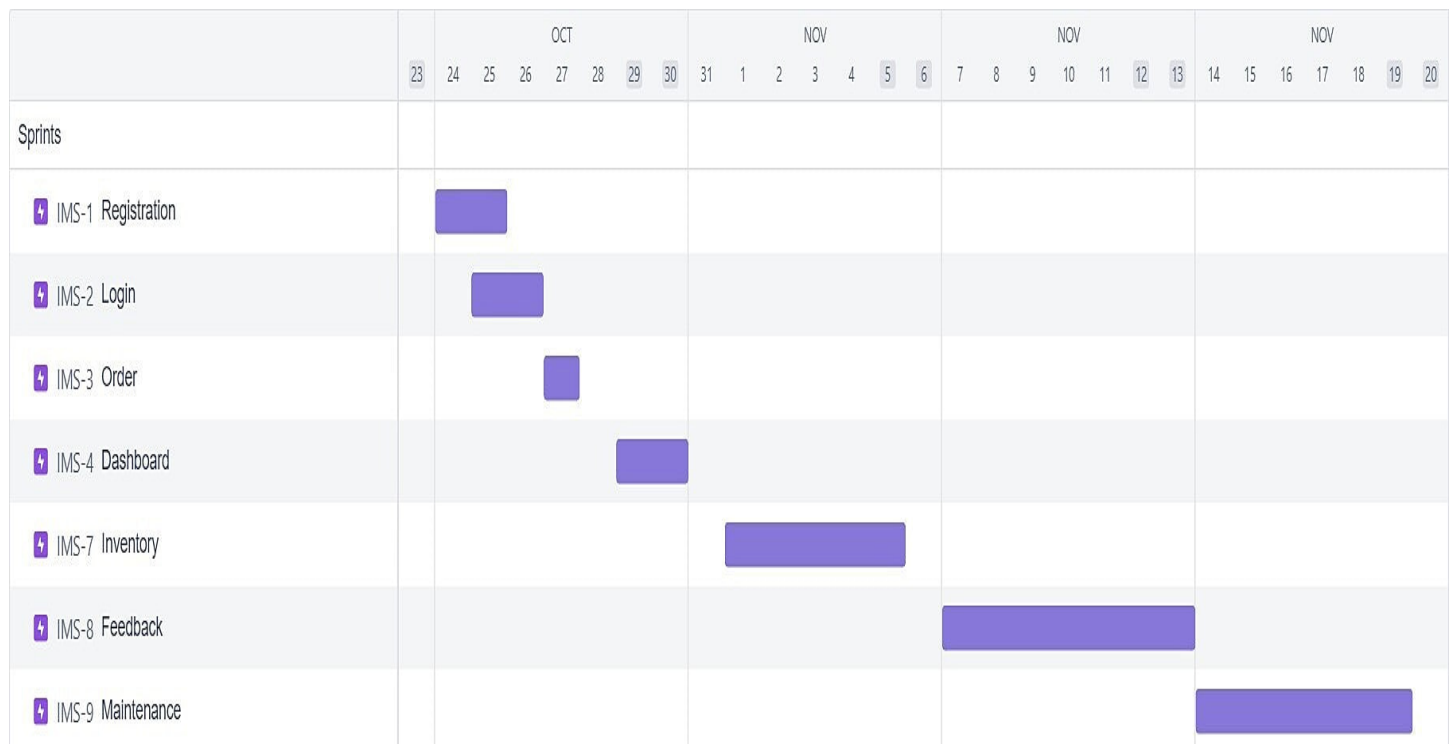

7.CODING & SOLUTIONING:

7.1 FEATURE 1:

Inventory control will help you to simplify warehouse processes. You can track orders and shipments. It will help you cut costs to make your process efficient. The inventory control software will help you with financial accounting system integration. You can track inventory in multiple locations. You can check SKU conversions, manage purchase orders, and handle bulk, batch, and serial consignments. You can also check the expiry date of your products. You can get customized software for inventory management even if you cater to a rare industry. For example, an Ottawa-based company, Cash for Trash, used our expertise to fulfill their needs for a niche industry like recycling. Our best-in-class custom-made inventory management software will help you lower inventory investment. You use every dollar spent on inventory with the highest returns.

7.2 FEATURE 2:

When you visit malls and grocery stores, you see the sales rep using a machine on everything you bought during billing. You can use this bar-coding to your advantage. Bar code will inform you about the product, cost, when it was picked up, shipped, etc. You can also use Radiofrequency identification (RFID) to track inventory. You can use active RFID for real-time tracking information and security. For example - you should go with Active RFID to get a live location for delivery. You can use passive RFID when there is no threat to security, which is why you see it in malls and shops.

8. TESTING:

Software testing is the process of evaluating and verifying that a software product or application does what it is supposed to do. The benefits of testing include preventing bugs, reducing development costs and improving performance.   There are many different types of software tests, each with specific objectives and strategies:

- **Acceptance testing:** Verifying whether the whole system works as intended.
- **Integration testing:** Ensuring that software components or functions operate together.
- **Unit testing:** Validating that each software unit performs as expected. A unit is the smallest testable component of an application.
- **Functional testing:** Checking functions by emulating business scenarios, based on functional requirements. Black-box testing is a common way to verify functions.
- **Performance testing:** Testing how the software performs under different workloads. Load testing, for example, is used to evaluate performance under real-life load conditions.
- **Regression testing:** Checking whether new features break or degrade functionality. Sanity testing can be used to verify menus, functions and commands at the surface level, when there is no time for a full regression test.
- **Stress testing:** Testing how much strain the system can take before it fails. Considered to be a type of non-functional testing.
- **Usability testing:** Validating how well a customer can use a system or web application to complete a task.

8.1 TEST CASES:

A test case is a defined format for software testing required to check if a particular application/software is working or not. A test case consists of a certain set of conditions that need to be checked to test an application or software i.e. in more simple terms when conditions are checked it checks if the resultant output meets with the expected output or not. A test case consists of various parameters such as Id, condition, steps, input, expected result, result, status, and remarks.

				Date	15-Nov-22								
				Team ID	PNT2022TMID39828								
				Project Name	Inventory Management System For Retailer								
				Maximum Marks	4 marks								
Test case ID	Feature Type	Component	Test Scenario	Pre-Requisite	Steps To Execute	Test Data	Expected Result	Actual Result	Status	Commnets	TC for Automation(Y/N)	BUG ID	Executed By
LoginPage_TC_001	Functional	Home Page	Verify user is able to see the Login/Signup popup when user clicked on My account button		1.Enter URL and click go 2.Click on My Account dropdown button 3.Verify login/Singup popup displayed or not		Login/Signup popup should display	Working as expected	Pass				Praveen Rajan
LoginPage_TC_002	UI	Home Page	Verify the UI elements in Login/Signup popup		1.Enter URL and click go 2.Click on My Account dropdown button 3.Verify login/Singup popup with below UI elements: a.email text box b.password text box c.Login button d.New customer? Create account link e.Last password? Recovery password link		Application should show below UI elements: a.email text box b.password text box c.Login button with orange colour d.New customer? Create account link e.Last password? Recovery password link	Working as expected	Pass				Rajkumar
LoginPage_TC_003	Functional	Home page	Verify user is able to log into application with Valid credentials		1.Enter URL and click go 2.Click on My Account dropdown button 3.Enter Valid username/email in Email text box 4.Enter valid password in password text box 5.Click on login button	Username: praveenrajan@gmail.com password: 123456	User should navigate to user account homepage	Working as expected	Pass				Muthu Narayanan
LoginPage_TC_004	Functional	Login page	Verify user is able to log into application with InValid credentials		1.Enter URL and click go 2.Click on My Account dropdown button 3.Enter InValid username/email in Email text box 4.Enter valid password in password text box 5.Click on login button	Username: praveenrajan@gmail.com password: 123456	Application should show 'Incorrect email or password ' validation message.	Working as expected	Pass				Dinesh Kannan
LoginPage_TC_004	Functional	Login page	Verify user is able to log into application with InValid credentials		1.Enter URL and click go 2.Click on My Account dropdown button 3.Enter Valid username/email in Email text box 4.Enter Invalid password in password text box 5.Click on login button	Username: praveenrajan@gmail.com password: 123456	Application should show 'Incorrect email or password ' validation message.	Working as expected	Pass				Praveen Rajan
LoginPage_TC_005	Functional	Login page	Verify user is able to log into application with InValid credentials		1.Enter URL and click go 2.Click on My Account dropdown button 3.Enter InValid username/email in Email text box 4.Enter Invalid password in password text box 5.Click on login button	Username: praveenrajan@gmail.com password: 123456	Application should show 'Incorrect email or password ' validation message.	Working as expected	Pass				Rajkumar

8.2 USER ACCEPTANCE TESTING:

1.Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the [ProductName] project at the time of the release to User Acceptance Testing (UAT).

2.Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	10	4	1	3	18
Duplicate	1	0	3	0	4
External	2	4	1	1	8
Fixed	5	2	1	15	23
Not Reproduced	0	0	0	0	1
Skipped	0	0	0	1	1
Won't Fix	0	2	0	1	3
Totals	18	12	6	21	58

3.Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
Print Engine	10	0	0	10
Client Application	10	0	0	10
Security	2	0	0	2
Outsource Shipping	0	0	0	0
Exception Reporting	9	0	0	9
Final Report Output	10	0	0	10
Version Control	1	0	0	1

9. RESULT:

PERFORMANCE METRICS:

Performance metrics are known as numbers and data representing organizations' abilities, actions, and overall quality. Various forms of performance metrics include profit, sales, customer happiness, return on investment, customer reviews, general quality, personal reviews, along with reputation in marketplaces. Take note that performance metrics can be various when they are viewed through many different industries. Performance metrics play an important role in any organization's success. It is necessary for any organization to choose its performance metrics, then paying attention to those areas since performance metrics support and guarantee an organization's success. Some key success elements are helpful in case they are tracked and acknowledged. Business measurements have to be controlled carefully to ensure they are providing the key answers, and the right questions are asked.

10. ADVANTAGES & DISADVANTAGES:

ADVANTAGES:

- **Understand Inventory Levels Across the Business:** ERP systems can provide an end-to-end view into orders through all departments, from sales to accounting to fulfillment. Centralized purchasing reduces duplication when replenishing stock, and having the ability to purchase in bulk saves money. Further benefits abound when you integrate your

inventory software with accounting and back-office processes.

- **Automate Manual Tasks:** Barcode and RFID scanning can speed stock-taking, receiving and fulfillment. Using software reduces errors from manual entries and frees staff from repetitive tasks.

- **Greater Visibility with Real-Time Data:** The right inventory management software will give you access to real-time information on all SKUs, in all facilities. It will deliver this data to all devices, no matter where you are.

- **Improve Forecasting:** Software that handles data collection and analytics can provide insights into trends. And when you understand trends, you can improve your stock forecasting.

DISADVANTAGES:

- **Expensive for Small Businesses:** The cost of inventory management software can seem daunting to a small business, but the investment often pays for itself in increased profits and improved customer loyalty. Additionally, cloud-based systems have made software that was once the domain of large enterprises available to smaller businesses.

- **Complex to Learn:** Business software is sometimes tricky to learn. However, managers can help by investing in online training to quickly bring users up to speed.

- **Risk of System Crashes:** Software does crash. However, you can remove the risk of data and productivity loss by using cloud-based platforms.

11. CONCLUSION:

It was a **wonderful learning experience** for me while working on this project. This project took me through the various phases of project development and gave me real insight into the world of software engineering.

12. FEATURE SCOPE:

The scope of an inventory system can cover many needs, including valuing the inventory, measuring the change in inventory and planning for future inventory levels. The value of the inventory at the end of each period provides a basis for financial reporting on the balance sheet. Measuring the change in inventory allows the company to determine the cost of inventory sold during the period. This allows the company to plan for future inventory needs.
